Course Description

Introduction to the entire discipline of forestry, including the history of forest use and management, North American forest regions, forest ecology, mensuration and management, forest products and the importance of forest resources other than wood fiber. Also provides overview of state, regional and local employment opportunities.

Course learning outcomes

1. Describe past and present uses of the forest.
2. Distinguish between conservation, preservation, and environmentalism.
3. Describe forest regions of the United States.
4. Compare and contrast the influences of Gifford Pinchot and John Muir.
5. Describe Forest Service organization.
6. Describe the Oregon Department of Forestry organization.
7. Read and prepare abstracts from resource management journals.
8. List examples of the work of a forester.
9. Describe various forest resources and their management issues.
10. Use vocabulary related to forest management and practice.
