Course Description

This course is the first of a three-class sequence. Prepares students for international field research training about conservation, sustainability and biodiversity. Topics include Indonesian people, culture and history, Indonesian language. Students will development and design a conservation-related field research project that will be conducted in Indonesia.

Course learning outcomes

1. Discuss cultural and historical aspects of Indonesia.
2. Express basic phrases in Bahasan language, orally and in writing.
3. Apply primary scientific literature about animal behavior (with an emphasis on primates) in order to create a field research project in the context of conservation, sustainability and biodiversity.
4. Sustainability outcome: Explain the interconnectedness of environmental, social, and economic systems in the context of field research on conservation, biodiversity and global health
